

Alpha AIR On-board Announcement System

The smarter solution for bus operators

Alpha AIR is a next-generation on-board announcement system built specifically for UK bus operators. Unlike fully automated systems, Alpha AIR gives **drivers the power to intervene when needed** — ensuring your passengers always receive accurate, timely information.

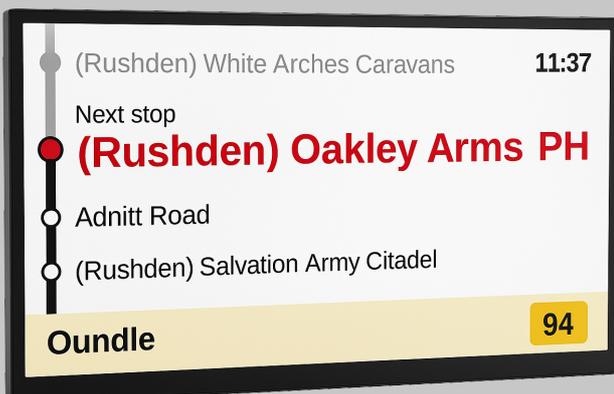

From **automatic next-stop announcements** to **driver-initiated corrections during diversions**, Alpha AIR enhances compliance, improves the passenger experience, and reduces operational errors.

How Alpha AIR Works:

- **Integrated GPS** for accurate location tracking
- **Audio playback** via onboard amplifier
- **Data input** from standard UK industry files (e.g. TransXChange)
- **Options for LED screen and/or LCD monitor** for passenger-facing information
- **Assisted management** for updates and diagnostics

Key Benefits:

- ✓ Simple, robust Hardware built for PSVs
- ✓ Automatic GPS next-stop announcements
- ✓ Pre-recorded on-board notice to passengers
- ✓ Driver override for accuracy & safety
- ✓ Supports vehicle tracking plus remote update
- ✓ Supports regional accents and languages

Why should operators choose Alpha AIR:

- **Designed for small & medium operators:** affordable, flexible, easy to manage.
- **Built for real-world conditions:** Handles diversions, cancellations, and route changes without confusion.
- **Drivers stay in control:** Your team can intervene and adjust the information provided to passengers.
- **Provision for ALL kind of works:** Railway replacement mode for temporary services to be introduced in 2026.
